AQUASHOT

## How to replace the shank and the water tank

Thank you for your purchase of our product. Carefully read this manual before use and utilize the product correctly and safely. After reading this manual, keep it in a safe place and read it as needed.

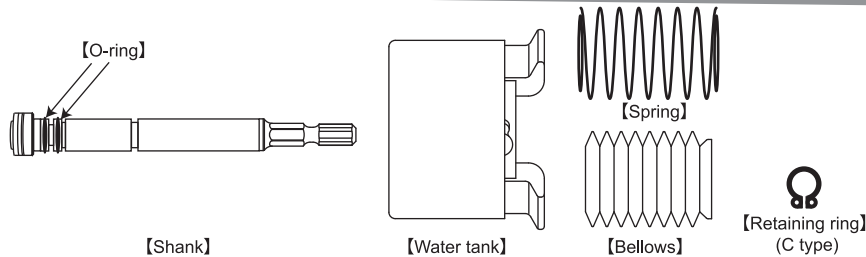

### Precaution for the replacement

Please do not re-disassemble after the replacement. Retaining stopper might become non-functional.

The retaining stopper fits to the groove of the shank and prevents the fall out of the water tank.

### Part names

### Preparation before the disassembly

Flip the release lever of the tank. Insert the standard water bottle to the filling port and evacuate the air and the water in the tank completely.

Deflated water tank.

### How to disassemble

- ① Remove the retaining ring (C type) with a snap ring plier.  
\*Be careful not to let the spring pop out.

- ② Remove the bellows and the spring.

- ③ Hold the water tank and strike the bottom of the shank to the ground. The water tank slides to the halfway. (till the part of the lever)

- ④ Push out the water tank while holding the release lever in the unlocked position.

### How to assemble

\*Please replace the O-ring of the shank if needed before the assembly.

- ① Push in the water tank to the shank till the half way. ( till the part of the lever) Continue pushing in the water tank while holding the release lever in the unlocked position.

- ② Insert the bellows and the spring after evacuating the air in the tank completely.

- ③ Set the retaining ring (C type) with a snap ring plier.
